

Soil Macronutrients

Drive critical early season rooting— add Arise to your Soil.

Arise™ is an ortho-phosphorus based starter fertilizer that caters to the demands of the seedling.

- Provides a “pop up” effect to drive critical early season rooting
- Low salt index for greater seedling safety
- Immediate plant available phosphorus
- Compatible with 28-0-0 (UAN) and the Micro-Che line of micronutrients

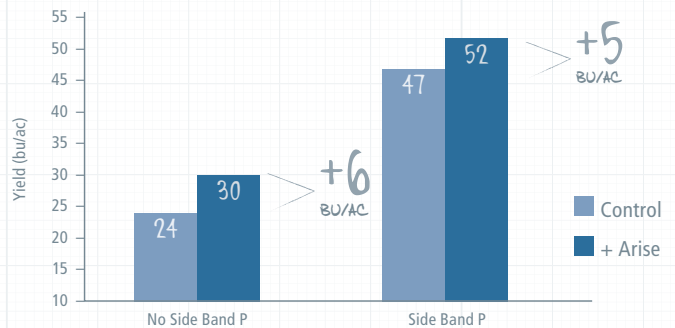

Proven Agronomic Performance

- By providing immediate plant available phosphorus, Arise increased overall wheat yield by an average 5 bu/ac.
- To achieve this increase in yield, Arise was applied at 10 lbs P2O5/ac. To determine the application rate needed for plant development and optimum yield potential, it is recommended to conduct soil and plant tissue sampling.

Product Recommendations

- Tank mix compatibility is impacted by water quality which may vary by location. Arise in concentrated form should not be mixed with other fertilizers and pesticides.
- When mixing, always ensure adequate dilution in the spray tank before adding Arise to other products. A jar test is always recommended to confirm the compatibility of Arise with other fertilizers or pesticides.
- To view the Arise SDS and Product Label and to read more information on compatibilities, please visit www.atpnutrition.ca

STARTER PHOSPHORUS = DELIVERS GENETIC POTENTIAL

Summary of 24 Wheat trials.
Arise applied at 10 lbs P2O5/ac.

Product	Analysis	Rate (L/ac)	Timing	Form
Arise	7-22-4	10-20	Soil	Liquid

At ATP, we believe a proactive, science-based and balanced nutrient plan is the single most effective way to deliver the genetic potential of the crop. We challenge the status quo to drive productivity. At ATP Nutrition, we believe in Powering Growth with Science®.
